

Earning ₹25,000 a month puts you in India's top 10%

Salaried employees who file income tax are relatively well off

SACHIN P MAMPATTA
Mumbai, 19 May

Making ₹3 lakh a year is enough to place you in the top 10 per cent of India's wage-earners.

The data is part of the "State of Inequality in India" report prepared by the India arm of a global competitiveness initiative, the Institute for Competitiveness. Bibek Debroy, chairman, Economic Advisory Council to the Prime Minister, had released the report on Wednesday. It recommended a scheme for the urban jobless and universal basic income as a means to reduce inequality.

The nature of one's work may make a difference to income, reveals a closer look at the numbers in the inequality report. The share of salaried workers tends to go up as income rises, while that of others, including the self-employed, shows signs of decreasing.

Regular salaried workers had an average share of 18.43 per cent among those with an annual income of ₹1 lakh or less, the report shows. The share of regular salaried workers rose to 41.59 per cent when the annual income was higher than ₹1 lakh. Self-employed workers accounted for 43.99 per cent of those earning an annual income of more than ₹1 lakh. They also accounted for 63.3 per cent on average of those earning less than ₹1 lakh a year (see chart 1).

The report looked at data from the Periodic Labour Force Survey (PLFS) 2019-20 to conclude that earning ₹25,000 per month would put a worker in the top 10 per cent of India's

wage-earners.

"If an amount like this comes in the top 10 percentile, then the bottom-most condition cannot be imagined... the benefits of growth should be equitably distributed..." the report said.

Business Standard also looked at Income Tax data to see how salary income is distributed. The categories are broad in the Income Tax data. The bottom 50 per cent account for only 22 per cent of the total salary income among those filing non-zero salary returns. This is based on salary income in returns for the assessment year 2018-19. The assessment year is one year after the financial year in which income is earned. So, this would correspond to the earnings for the financial year 2017-18 (FY18).

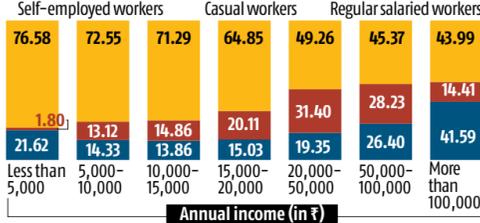

It was similar for the 2012-13 assessment year, which corresponds to FY12. The bottom 48 per cent of the population earned 18 per cent of the total salary income. Exact comparisons to FY18 numbers are not possible because of the lack of granular data. There is some information, however, on broad income categories.

Those filing income tax returns are better off. The ₹3-lakh figure, which would put one in the top 10 per cent, is for wages earned across all workers in India, according to the State of Inequality report. But more than 70 per cent of salaried employees earned more than ₹3.5 lakh per annum as of FY18.

A large proportion of this is concentrated within the bracket of ₹3.5 lakh to ₹10 lakh. They account for 56.9 per cent of the returns filed. Only 2.3 per cent

SALARIES OF LESS THAN 3% EXCEED ₹25 LAKH

Note: Those reporting zero salary were excluded from the analysis. Salaries at the upper limit of a given income segment are included in the same segment. Source: Income tax return statistics for assessment year 2018-19

earn ₹25 lakh or above.

Inequality in wages has been rising, found the report that examined data from various PLFS rounds.

"Across three survey rounds (2017-18, 2018-19 and 2019-20),

the share of the top 1 per cent in the total income has only increased — from 6.14 per cent in 2017-18 to 6.84 per cent in 2018-19. In 2019-20, the top 1 per cent registered a marginal fall," the report said.

Mean temperatures, sea levels and carbon emissions at record high

CLIMATE ALERT: Probability of mean temperatures crossing 1.5 degrees in five years has increased to 50 per cent: World Meteorological Organisation report

ISHAAN GERA
New Delhi, 19 May

On Wednesday, the State of the Global Climate report 2021, released by the World Meteorological Organisation (WMO), highlighted that the global mean temperature last year was 1.1 degrees higher than the 1850-1900 levels. The researchers arrived at this estimate using the methodology of the report by the International Panel for Climate Change (IPCC).

Though lower than 2016, when temperatures had hit their highest levels due to El Nino conditions, the five-year average mean temperatures were still at their highest.

An earlier report by WMO had found that the probability of temperatures rising above 1.5 degrees Celsius between 2022 and 2026 had increased to 50 per cent. Between 2017 and 2021, there was only a 10 per cent chance of temperatures rising above 1.5 degrees Celsius.

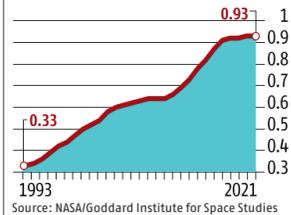

Analysis by *Business Standard* shows that temperatures rose 34.8 per cent in the last decade, faster than the 19 per cent growth witnessed between 2003 and 2012. Between 1994 and 2003, there was a 70.6 per cent rise in land-ocean temperatures, according

ANALYSIS SHOWS THAT TEMPERATURES ROSE 34.8% IN THE LAST DECADE, FASTER THAN THE 19% GROWTH WITNESSED BETWEEN 2003 AND 2012

Source: NASA/Goddard Institute for Space Studies

CARBON DIOXIDE LEVELS ARE AT THEIR HIGHEST

Carbon dioxide levels, ppm, de-seasonalised

Source: National Oceanic and Atmospheric Administration

to the National Aeronautics and Space Administration (NASA) data.

Further analysis indicates that not just mean temperatures, sea levels and carbon dioxide levels, too, were at their highest in 2021. According to NASA's global climate change initiative data, sea levels have risen 102.3 mm since 1993 — up 50 per cent in the last decade, from 56.5 mm in 2012 to 102 in January 2022.

Carbon dioxide levels, too, were the highest in April 2022, at 420 parts per million. This was a 5 per cent increase compared to a decade-ago period. Between 2004 and 2013, the rise in carbon emissions was slightly lower, at 4.5 per cent.

An earlier IPCC report had pointed out that if the temperatures were to increase by 1.5 degrees Celsius, hot temperature events would increase by 4.1 times in a decade; heavy precipitation events would rise by 1.5 times; and the likelihood of agricultural ecological droughts would double. Some sub-stations in Delhi have already recorded temperatures of 49 degree Celsius last week.

Notes:

- As a result of restriction on business activities and business shutdowns, the volumes of the financial year 2020-21 is impacted. Therefore, financial results for the quarter ended 31st March, 2022 are not comparable to previous corresponding period results. Further the management believes that the impact of this outbreak on the business and financial position of the Company will not be significant. The management does not see any risks in the Company's ability to continue as a going concern and meeting its liabilities as and when they fall due.
- The figures of the corresponding previous quarter or year have been regrouped or reclassified where ever necessary, to make them comparable.
- Results are prepared in compliance with Indian Accounting Standard, ("Ind-AS") notified by the Ministry of Corporate Affairs.
- The above Financial Results were reviewed by the Audit Committee and approved by the Board of Directors at their respective meetings held on 19th May, 2022.
- The Company has only one segment of activity namely Textile.
- EPS of the earlier period being adjusted as a result of Bonus Issue for comparison purpose.

Notes:

- As a result of restriction on business activities and business shutdowns, the volumes of the financial year 2020-21 is impacted. Therefore, financial results for the quarter ended 31st March, 2022 are not comparable to previous corresponding period results. Further the management believes that the impact of this outbreak on the business and financial position of the Company will not be significant. The management does not see any risks in the Company's ability to continue as a going concern and meeting its liabilities as and when they fall due.
- The figures of the corresponding previous quarter or year have been regrouped or reclassified where ever necessary, to make them comparable.
- Results are prepared in compliance with Indian Accounting Standard, ("Ind-AS") notified by the Ministry of Corporate Affairs.
- The above Financial Results were reviewed by the Audit Committee and approved by the Board of Directors at their respective meetings held on 19th May, 2022.
- The Company has only one segment of activity namely Textile.
- EPS of the earlier period being adjusted as a result of Bonus Issue for comparison purpose.

Earning ₹25,000 a month puts you in India's top 10%

Salaried employees who file income tax are relatively well off

SACHIN P MAMPATTA
Mumbai, 19 May

Making ₹3 lakh a year is enough to place you in the top 10 per cent of India's wage-earners.

The data is part of the "State of Inequality in India" report prepared by the India arm of a global competitiveness initiative, the Institute for Competitiveness. Bibek Debroy, chairman, Economic Advisory Council to the Prime Minister, had released the report on Wednesday. It recommended a scheme for the urban jobless and universal basic income as a means to reduce inequality.

The nature of one's work may make a difference to income, reveals a closer look at the numbers in the inequality report. The share of salaried workers tends to go up as income rises, while that of others, including the self-employed, shows signs of decreasing.

Regular salaried workers had an average share of 18.43 per cent among those with an annual income of ₹1 lakh or less, the report shows. The share of regular salaried workers rose to 41.59 per cent when the annual income was higher than ₹1 lakh. Self-employed workers accounted for 43.99 per cent of those earning an annual income of more than ₹1 lakh. They also accounted for 63.3 per cent on average of those earning less than ₹1 lakh a year (see chart 1).

The report looked at data from the Periodic Labour Force Survey (PLFS) 2019-20 to conclude that earning ₹25,000 per month would put a worker in the top 10 per cent of India's

wage-earners.

"If an amount like this comes in the top 10 percentile, then the bottom-most condition cannot be imagined... the benefits of growth should be equitably distributed..." the report said.

Business Standard also looked at Income Tax data to see how salary income is distributed. The categories are broad in the Income Tax data. The bottom 50 per cent account for only 22 per cent of the total salary income among those filing non-zero salary returns. This is based on salary income in returns for the assessment year 2018-19. The assessment year is one year after the financial year in which income is earned. So, this would correspond to the earnings for the financial year 2017-18 (FY18).

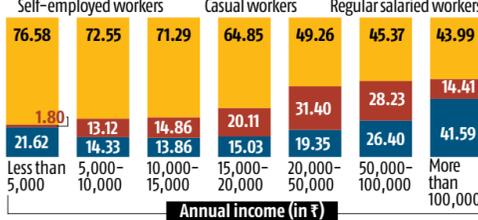

It was similar for the 2012-13 assessment year, which corresponds to FY12. The bottom 48 per cent of the population earned 18 per cent of the total salary income. Exact comparisons to FY18 numbers are not possible because of the lack of granular data. There is some information, however, on broad income categories.

Those filing income tax returns are better off. The ₹3-lakh figure, which would put one in the top 10 per cent, is for wages earned across all workers in India, according to the State of Inequality report. But more than 70 per cent of salaried employees earned more than ₹3.5 lakh per annum as of FY18.

A large proportion of this is concentrated within the bracket of ₹3.5 lakh to ₹10 lakh. They account for 56.9 per cent of the returns filed. Only 2.3 per cent

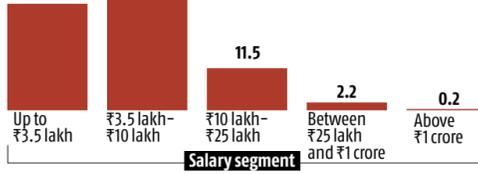

SHARE OF SALARIED WORKERS GOES UP AS INCOME RISES

Source: The State of Inequality in India Report

SALARIES OF LESS THAN 3% EXCEED ₹25 LAKH

Note: Those reporting zero salary were excluded from the analysis. Salaries at the upper limit of a given income segment are included in the same segment. Source: Income tax return statistics for assessment year 2018-19

earn ₹25 lakh or above.

Inequality in wages has been rising, found the report that examined data from various PLFS rounds.

"Across three survey rounds (2017-18, 2018-19 and 2019-20),

the share of the top 1 per cent in the total income has only increased — from 6.14 per cent in 2017-18 to 6.84 per cent in 2018-19. In 2019-20, the top 1 per cent registered a marginal fall," the report said.

Mean temperatures, sea levels and carbon emissions at record high

CLIMATE ALERT: Probability of mean temperatures crossing 1.5 degrees in five years has increased to 50 per cent: World Meteorological Organisation report

ISHAAN GERA
New Delhi, 19 May

On Wednesday, the State of the Global Climate report 2021, released by the World Meteorological Organisation (WMO), highlighted that the global mean temperature last year was 1.1 degrees higher than the 1850-1900 levels. The researchers arrived at this estimate using the methodology of the report by the International Panel for Climate Change (IPCC).

Though lower than 2016, when temperatures had hit their highest levels due to El Nino conditions, the five-year average mean temperatures were still at their highest.

An earlier report by WMO had found that the probability of temperatures rising above 1.5 degrees Celsius between 2022 and 2026 had increased to 50 per cent. Between 2017 and 2021, there was only a 10 per cent chance of temperatures rising above 1.5 degrees Celsius.

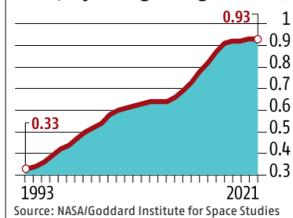

Analysis by *Business Standard* shows that temperatures rose 34.8 per cent in the last decade, faster than the 19 per cent growth witnessed between 2003 and 2012. Between 1994 and 2003, there was a 70.6 per cent rise in land-ocean temperatures, according

ANALYSIS SHOWS THAT TEMPERATURES ROSE 34.8% IN THE LAST DECADE, FASTER THAN THE 19% GROWTH WITNESSED BETWEEN 2003 AND 2012

THE PACE OF TEMPERATURE GROWTH HAS DOUBLED IN A DECADE

Source: NASA/Goddard Institute for Space Studies

CARBON DIOXIDE LEVELS ARE AT THEIR HIGHEST

Carbon dioxide levels, ppm, de-seasonalised

Source: National Oceanic and Atmospheric Administration

to the National Aeronautics and Space Administration (NASA) data.

Further analysis indicates that not just mean temperatures, sea levels and carbon dioxide levels, too, were at their highest in 2021. According to NASA's global climate change initiative data, sea levels have risen 102.3 mm since 1993 — up 50 per cent in the last decade, from 56.5 mm in 2012 to 102 in January 2022.

Carbon dioxide levels, too, were

the highest in April 2022, at 420 parts per million. This was a 5 per cent increase compared to a decade-ago period. Between 2004 and 2013, the rise in carbon emissions was slightly lower, at 4.5 per cent.

An earlier IPCC report had pointed out that if the temperatures were to increase by 1.5 degrees Celsius, hot temperature events would increase by 4.1 times in a decade; heavy precipitation events would rise by 1.5 times; and the likelihood of agricultural ecological droughts would double.

Some sub-stations in Delhi have already recorded temperatures of 49 degree Celsius last week.

CARBON DIOXIDE LEVELS ARE AT THEIR HIGHEST

Carbon dioxide levels, ppm, de-seasonalised

Source: National Oceanic and Atmospheric Administration

to the National Aeronautics and Space Administration (NASA) data.

Further analysis indicates that not just mean temperatures, sea levels and carbon dioxide levels, too, were at their highest in 2021. According to NASA's global climate change initiative data, sea levels have risen 102.3 mm since 1993 — up 50 per cent in the last decade, from 56.5 mm in 2012 to 102 in January 2022.

Carbon dioxide levels, too, were

the highest in April 2022, at 420 parts per million. This was a 5 per cent increase compared to a decade-ago period. Between 2004 and 2013, the rise in carbon emissions was slightly lower, at 4.5 per cent.

An earlier IPCC report had pointed out that if the temperatures were to increase by 1.5 degrees Celsius, hot temperature events would increase by 4.1 times in a decade; heavy precipitation events would rise by 1.5 times; and the likelihood of agricultural ecological droughts would double.

Some sub-stations in Delhi have already recorded temperatures of 49 degree Celsius last week.

Notes:

- As a result of restriction on business activities and business shutdowns, the volumes of the financial year 2020-21 is impacted. Therefore, financial results for the quarter ended 31st March, 2022 are not comparable to previous corresponding period results. Further the management believes that the impact of this outbreak on the business and financial position of the Company will not be significant. The management does not see any risks in the Company's ability to continue as a going concern and meeting its liabilities as and when they fall due.
- The figures of the corresponding previous quarter or year have been regrouped or reclassified where ever necessary, to make them comparable.
- Results are prepared in compliance with Indian Accounting Standard, ("Ind-AS") notified by the Ministry of Corporate Affairs.
- The above Financial Results were reviewed by the Audit Committee and approved by the Board of Directors at their respective meetings held on 19th May, 2022.
- The Company has only one segment of activity namely Textile.
- EPS of the earlier period being adjusted as a result of Bonus Issue for comparison purpose.

Earning ₹25,000 a month puts you in India's top 10%

Salaried employees who file income tax are relatively well off

SACHIN P MAMPATTA
Mumbai, 19 May

Making ₹3 lakh a year is enough to place you in the top 10 per cent of India's wage-earners.

The data is part of the "State of Inequality in India" report prepared by the India arm of a global competitiveness initiative, the Institute for Competitiveness. Bibek Debroy, chairman, Economic Advisory Council to the Prime Minister, had released the report on Wednesday. It recommended a scheme for the urban jobless and universal basic income as a means to reduce inequality.

The nature of one's work may make a difference to income, reveals a closer look at the numbers in the inequality report. The share of salaried workers tends to go up as income rises, while that of others, including the self-employed, shows signs of decreasing.

Regular salaried workers had an average share of 18.43 per cent among those with an annual income of ₹1 lakh or less, the report shows. The share of regular salaried workers rose to 41.59 per cent when the annual income was higher than ₹1 lakh. Self-employed workers accounted for 43.99 per cent of those earning an annual income of more than ₹1 lakh. They also accounted for 63.3 per cent on average of those earning less than ₹1 lakh a year (see chart 1).

The report looked at data from the Periodic Labour Force Survey (PLFS) 2019-20 to conclude that earning ₹25,000 per month would put a worker in the top 10 per cent of India's

wage-earners.

"If an amount like this comes in the top 10 percentile, then the bottom-most condition cannot be imagined... the benefits of growth should be equitably distributed..." the report said.

Business Standard also looked at Income Tax data to see how salary income is distributed. The categories are broad in the Income Tax data. The bottom 50 per cent account for only 22 per cent of the total salary income among those filing non-zero salary returns. This is based on salary income in returns for the assessment year 2018-19. The assessment year is one year after the financial year in which income is earned. So, this would correspond to the earnings for the financial year 2017-18 (FY18).

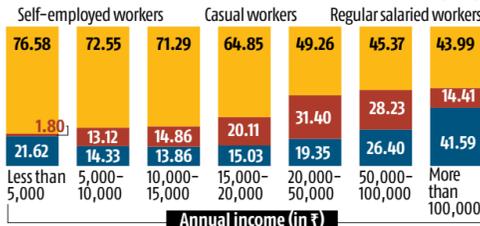

It was similar for the 2012-13 assessment year, which corresponds to FY12. The bottom 48 per cent of the population earned 18 per cent of the total salary income. Exact comparisons to FY18 numbers are not possible because of the lack of granular data. There is some information, however, on broad income categories.

Those filing income tax returns are better off. The ₹3-lakh figure, which would put one in the top 10 per cent, is for wages earned across all workers in India, according to the State of Inequality report. But more than 70 per cent of salaried employees earned more than ₹3.5 lakh per annum as of FY18.

A large proportion of this is concentrated within the bracket of ₹3.5 lakh to ₹10 lakh. They account for 56.9 per cent of the returns filed. Only 2.3 per cent

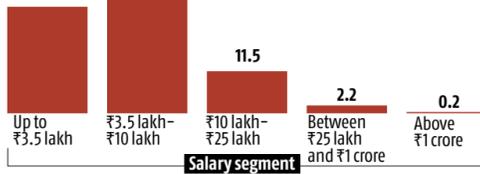

SHARE OF SALARIED WORKERS GOES UP AS INCOME RISES

Source: The State of Inequality in India Report

SALARIES OF LESS THAN 3% EXCEED ₹25 LAKH

Note: Those reporting zero salary were excluded from the analysis. Salaries at the upper limit of a given income segment are included in the same segment. Source: Income tax return statistics for assessment year 2018-19

earn ₹25 lakh or above.

Inequality in wages has been rising, found the report that examined data from various PLFS rounds.

"Across three survey rounds (2017-18, 2018-19 and 2019-20),

the share of the top 1 per cent in the total income has only increased — from 6.14 per cent in 2017-18 to 6.84 per cent in 2018-19. In 2019-20, the top 1 per cent registered a marginal fall," the report said.

Mean temperatures, sea levels and carbon emissions at record high

CLIMATE ALERT: Probability of mean temperatures crossing 1.5 degrees in five years has increased to 50 per cent: World Meteorological Organisation report

ISHAAN GERA
New Delhi, 19 May

On Wednesday, the State of the Global Climate report 2021, released by the World Meteorological Organisation (WMO), highlighted that the global mean temperature last year was 1.1 degrees higher than the 1850-1900 levels. The researchers arrived at this estimate using the methodology of the report by the International Panel for Climate Change (IPCC).

Though lower than 2016, when temperatures had hit their highest levels due to El Nino conditions, the five-year average mean temperatures were still at their highest.

An earlier report by WMO had found that the probability of temperatures rising above 1.5 degrees Celsius between 2022 and 2026 had increased to 50 per cent. Between 2017 and 2021, there was only a 10 per cent chance of temperatures rising above 1.5 degrees Celsius.

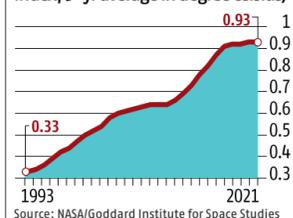

Analysis by *Business Standard* shows that temperatures rose 34.8 per cent in the last decade, faster than the 19 per cent growth witnessed between 2003 and 2012. Between 1994 and 2003, there was a 70.6 per cent rise in land-ocean temperatures, according

Earning ₹25,000 a month puts you in India's top 10%

Salaried employees who file income tax are relatively well off

SACHIN P MAMPATTA
Mumbai, 19 May

Making ₹3 lakh a year is enough to place you in the top 10 per cent of India's wage-earners.

The data is part of the "State of Inequality in India" report prepared by the India arm of a global competitiveness initiative, the Institute for Competitiveness. Bibek Debroy, chairman, Economic Advisory Council to the Prime Minister, had released the report on Wednesday. It recommended a scheme for the urban jobless and universal basic income as a means to reduce inequality.

The nature of one's work may make a difference to income, reveals a closer look at the numbers in the inequality report. The share of salaried workers tends to go up as income rises, while that of others, including the self-employed, shows signs of decreasing.

Regular salaried workers had an average share of 18.43 per cent among those with an annual income of ₹1 lakh or less, the report shows. The share of regular salaried workers rose to 41.59 per cent when the annual income was higher than ₹1 lakh. Self-employed workers accounted for 43.99 per cent of those earning an annual income of more than ₹1 lakh. They also accounted for 63.3 per cent on average of those earning less than ₹1 lakh a year (see chart 1).

The report looked at data from the Periodic Labour Force Survey (PLFS) 2019-20 to conclude that earning ₹25,000 per month would put a worker in the top 10 per cent of India's

wage-earners.

"If an amount like this comes in the top 10 percentile, then the bottom-most condition cannot be imagined... the benefits of growth should be equitably distributed..." the report said.

Business Standard also looked at Income Tax data to see how salary income is distributed. The categories are broad in the Income Tax data. The bottom 50 per cent account for only 22 per cent of the total salary income among those filing non-zero salary returns. This is based on salary income in returns for the assessment year 2018-19. The assessment year is one year after the financial year in which income is earned. So, this would correspond to the earnings for the financial year 2017-18 (FY18).

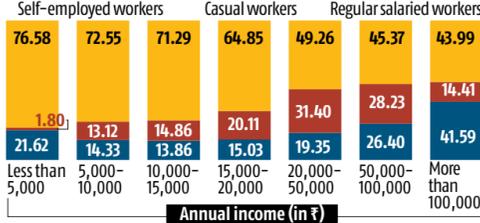

It was similar for the 2012-13 assessment year, which corresponds to FY12. The bottom 48 per cent of the population earned 18 per cent of the total salary income. Exact comparisons to FY18 numbers are not possible because of the lack of granular data. There is some information, however, on broad income categories.

Those filing income tax returns are better off. The ₹3-lakh figure, which would put one in the top 10 per cent, is for wages earned across all workers in India, according to the State of Inequality report. But more than 70 per cent of salaried employees earned more than ₹3.5 lakh per annum as of FY18.

A large proportion of this is concentrated within the bracket of ₹3.5 lakh to ₹10 lakh. They account for 56.9 per cent of the returns filed. Only 2.3 per cent

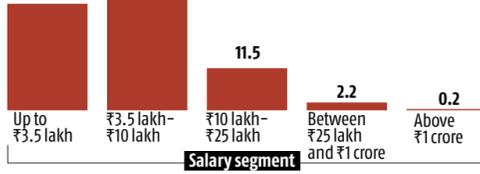

SHARE OF SALARIED WORKERS GOES UP AS INCOME RISES

SALARIES OF LESS THAN 3% EXCEED ₹25 LAKH

Note: Those reporting zero salary were excluded from the analysis. Salaries at the upper limit of a given income segment are included in the same segment. Source: Income tax return statistics for assessment year 2018-19

earn ₹25 lakh or above.

Inequality in wages has been rising, found the report that examined data from various PLFS rounds.

"Across three survey rounds (2017-18, 2018-19 and 2019-20),

the share of the top 1 per cent in the total income has only increased — from 6.14 per cent in 2017-18 to 6.84 per cent in 2018-19. In 2019-20, the top 1 per cent registered a marginal fall," the report said.

Mean temperatures, sea levels and carbon emissions at record high

CLIMATE ALERT: Probability of mean temperatures crossing 1.5 degrees in five years has increased to 50 per cent: World Meteorological Organisation report

ISHAAN GERA
New Delhi, 19 May

On Wednesday, the State of the Global Climate report 2021, released by the World Meteorological Organisation (WMO), highlighted that the global mean temperature last year was 1.1 degrees higher than the 1850-1900 levels. The researchers arrived at this estimate using the methodology of the report by the International Panel for Climate Change (IPCC).

Though lower than 2016, when temperatures had hit their highest levels due to El Nino conditions, the five-year average mean temperatures were still at their highest.

An earlier report by WMO had found that the probability of temperatures rising above 1.5 degrees Celsius between 2022 and 2026 had increased to 50 per cent. Between 2017 and 2021, there was only a 10 per cent chance of temperatures rising above 1.5 degrees Celsius.

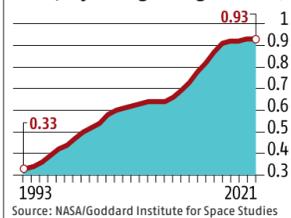

Analysis by *Business Standard* shows that temperatures rose 34.8 per cent in the last decade, faster than the 19 per cent growth witnessed between 2003 and 2012. Between 1994 and 2003, there was a 70.6 per cent rise in land-ocean temperatures, according

ANALYSIS SHOWS THAT TEMPERATURES ROSE 34.8% IN THE LAST DECADE, FASTER THAN THE 19% GROWTH WITNESSED BETWEEN 2003 AND 2012

THE PACE OF TEMPERATURE GROWTH HAS DOUBLED IN A DECADE

Source: NASA/Goddard Institute for Space Studies

CARBON DIOXIDE LEVELS ARE AT THEIR HIGHEST

Carbon dioxide levels, ppm, de-seasonalised

Source: National Oceanic and Atmospheric Administration

to the National Aeronautics and Space Administration (NASA) data.

Further analysis indicates that not just mean temperatures, sea levels and carbon dioxide levels, too, were at their highest in 2021. According to NASA's global climate change

initiative data, sea levels have risen 102.3 mm since 1993 — up 50 per cent in the last decade, from 56.5 mm in 2012 to 102 in January 2022.

Carbon dioxide levels, too, were

the highest in April 2022, at 420 parts per million. This was a 5 per cent increase compared to a decade-ago period. Between 2004 and 2013, the rise in carbon emissions was slightly lower, at 4.5 per cent.

An earlier IPCC report had pointed out that if the temperatures were to increase by 1.5 degrees Celsius, hot temperature events would increase by 4.1 times in a decade; heavy precipitation events would rise by 1.5 times; and the likelihood of agricultural ecological droughts would double.

Some sub-stations in Delhi have already recorded temperatures of 49 degree Celsius last week.

Notes:

- As a result of restriction on business activities and business shutdowns, the volumes of the financial year 2020-21 is impacted. Therefore, financial results for the quarter ended 31st March, 2022 are not comparable to previous corresponding period results. Further the management believes that the impact of this outbreak on the business and financial position of the Company will not be significant. The management does not see any risks in the Company's ability to continue as a going concern and meeting its liabilities as and when they fall due.
- The figures of the corresponding previous quarter or year have been regrouped or reclassified where ever necessary, to make them comparable.
- Results are prepared in compliance with Indian Accounting Standard, ("Ind-AS") notified by the Ministry of Corporate Affairs.
- The above Financial Results were reviewed by the Audit Committee and approved by the Board of Directors at their respective meetings held on 19th May, 2022.
- The Company has only one segment of activity namely Textile.
- EPS of the earlier period being adjusted as a result of Bonus Issue for comparison purpose.

Earning ₹25,000 a month puts you in India's top 10%

Salaried employees who file income tax are relatively well off

SACHIN P MAMPATTA
Mumbai, 19 May

Making ₹3 lakh a year is enough to place you in the top 10 per cent of India's wage-earners.

The data is part of the "State of Inequality in India" report prepared by the India arm of a global competitiveness initiative, the Institute for Competitiveness. Bibek Debroy, chairman, Economic Advisory Council to the Prime Minister, had released the report on Wednesday. It recommended a scheme for the urban jobless and universal basic income as a means to reduce inequality.

The nature of one's work may make a difference to income, reveals a closer look at the numbers in the inequality report. The share of salaried workers tends to go up as income rises, while that of others, including the self-employed, shows signs of decreasing.

Regular salaried workers had an average share of 18.43 per cent among those with an annual income of ₹1 lakh or less, the report shows. The share of regular salaried workers rose to 41.59 per cent when the annual income was higher than ₹1 lakh. Self-employed workers accounted for 43.99 per cent of those earning an annual income of more than ₹1 lakh. They also accounted for 63.3 per cent on average of those earning less than ₹1 lakh a year (see chart 1).

The report looked at data from the Periodic Labour Force Survey (PLFS) 2019-20 to conclude that earning ₹25,000 per month would put a worker in the top 10 per cent of India's

wage-earners.

"If an amount like this comes in the top 10 percentile, then the bottom-most condition cannot be imagined... the benefits of growth should be equitably distributed..." the report said.

Business Standard also looked at Income Tax data to see how salary income is distributed. The categories are broad in the Income Tax data. The bottom 50 per cent account for only 22 per cent of the total salary income among those filing non-zero salary returns. This is based on salary income in returns for the assessment year 2018-19. The assessment year is one year after the financial year in which income is earned. So, this would correspond to the earnings for the financial year 2017-18 (FY18).

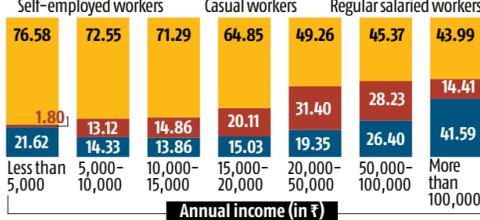

It was similar for the 2012-13 assessment year, which corresponds to FY12. The bottom 48 per cent of the population earned 18 per cent of the total salary income. Earning ₹25,000 a month puts you in India's top 10%

Salaried employees who file income tax are relatively well off

SACHIN P MAMPATTA
Mumbai, 19 May

Making ₹3 lakh a year is enough to place you in the top 10 per cent of India's wage-earners.

The data is part of the "State of Inequality in India" report prepared by the India arm of a global competitiveness initiative, the Institute for Competitiveness. Bibek Debroy, chairman, Economic Advisory Council to the Prime Minister, had released the report on Wednesday. It recommended a scheme for the urban jobless and universal basic income as a means to reduce inequality.

The nature of one's work may make a difference to income, reveals a closer look at the numbers in the inequality report. The share of salaried workers tends to go up as income rises, while that of others, including the self-employed, shows signs of decreasing.

Regular salaried workers had an average share of 18.43 per cent among those with an annual income of ₹1 lakh or less, the report shows. The share of regular salaried workers rose to 41.59 per cent when the annual income was higher than ₹1 lakh. Self-employed workers accounted for 43.99 per cent of those earning an annual income of more than ₹1 lakh. They also accounted for 63.3 per cent on average of those earning less than ₹1 lakh a year (see chart 1).

The report looked at data from the Periodic Labour Force Survey (PLFS) 2019-20 to conclude that earning ₹25,000 per month would put a worker in the top 10 per cent of India's

wage-earners.

"If an amount like this comes in the top 10 percentile, then the bottom-most condition cannot be imagined... the benefits of growth should be equitably distributed..." the report said.

Business Standard also looked at Income Tax data to see how salary income is distributed. The categories are broad in the Income Tax data. The bottom 50 per cent account for only 22 per cent of the total salary income among those filing non-zero salary returns. This is based on salary income in returns for the assessment year 2018-19. The assessment year is one year after the financial year in which income is earned. So, this would correspond to the earnings for the financial year 2017-18 (FY18).

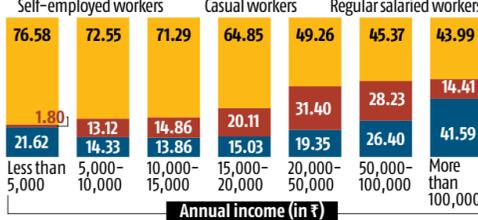

It was similar for the 2012-13 assessment year, which corresponds to FY12. The bottom 48 per cent of the population earned 18 per cent of the total salary income. Exact comparisons to FY18 numbers are not possible because of the lack of granular data. There is some information, however, on broad income categories.

Those filing income tax returns are better off. The ₹3-lakh figure, which would put one in the top 10 per cent, is for wages earned across all workers in India, according to the State of Inequality report. But more than 70 per cent of salaried employees earned more than ₹3.5 lakh per annum as of FY18.

A large proportion of this is concentrated within the bracket of ₹3.5 lakh to ₹10 lakh. They account for 56.9 per cent of the returns filed. Only 2.3 per cent

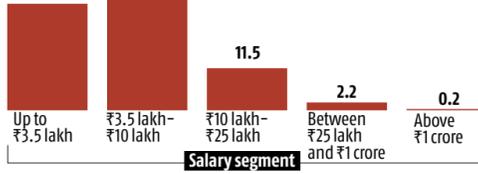

SHARE OF SALARIED WORKERS GOES UP AS INCOME RISES

Source: The State of Inequality in India Report

SALARIES OF LESS THAN 3% EXCEED ₹25 LAKH

Note: Those reporting zero salary were excluded from the analysis. Salaries at the upper limit of a given income segment are included in the same segment. Source: Income tax return statistics for assessment year 2018-19

earn ₹25 lakh or above.

Inequality in wages has been rising, found the report that examined data from various PLFS rounds.

"Across three survey rounds (2017-18, 2018-19 and 2019-20),

the share of the top 1 per cent in the total income has only increased — from 6.14 per cent in 2017-18 to 6.84 per cent in 2018-19. In 2019-20, the top 1 per cent registered a marginal fall," the report said.

Mean temperatures, sea levels and carbon emissions at record high

CLIMATE ALERT: Probability of mean temperatures crossing 1.5 degrees in five years has increased to 50 per cent: World Meteorological Organisation report

ISHAAN GERA
New Delhi, 19 May

On Wednesday, the State of the Global Climate report 2021, released by the World Meteorological Organisation (WMO), highlighted that the global mean temperature last year was 1.1 degrees higher than the 1850-1900 levels. The researchers arrived at this estimate using the methodology of the report by the International Panel for Climate Change (IPCC).

Though lower than 2016, when temperatures had hit their highest levels due to El Nino conditions, the five-year average mean temperatures were still at their highest.

An earlier report by WMO had found that the probability of temperatures rising above 1.5 degrees Celsius between 2022 and 2026 had increased to 50 per cent. Between 2017 and 2021, there was only a 10 per cent chance of temperatures rising above 1.5 degrees Celsius.

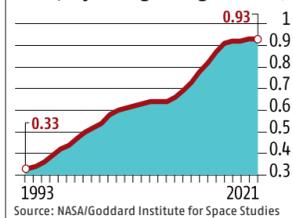

Analysis by *Business Standard* shows that temperatures rose 34.8 per cent in the last decade, faster than the 19 per cent growth witnessed between 2003 and 2012. Between 1994 and 2003, there was a 70.6 per cent rise in land-ocean temperatures, according

ANALYSIS SHOWS THAT TEMPERATURES ROSE 34.8% IN THE LAST DECADE, FASTER THAN THE 19% GROWTH WITNESSED BETWEEN 2003 AND 2012

THE PACE OF TEMPERATURE GROWTH HAS DOUBLED IN A DECADE

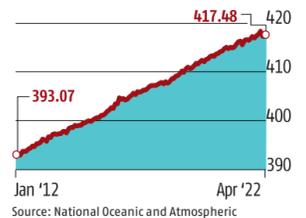

(Global Land-Ocean Temperature Index, 5-yr average in degree Celsius)

Source: NASA/Goddard Institute for Space Studies

CARBON DIOXIDE LEVELS ARE AT THEIR HIGHEST

Carbon dioxide levels, ppm, de-seasonalised

Source: National Oceanic and Atmospheric Administration

to the National Aeronautics and Space Administration (NASA) data.

Further analysis indicates that not just mean temperatures, sea levels and carbon dioxide levels, too, were at their highest in 2021. According to NASA's global climate change initiative data, sea levels have risen 102.3 mm since 1993 — up 50 per cent in the last decade, from 56.5 mm in 2012 to 102 in January 2022.

Carbon dioxide levels, too, were

the highest in April 2022, at 420 parts per million. This was a 5 per cent increase compared to a decade-ago period. Between 2004 and 2013, the rise in carbon emissions was slightly lower, at 4.5 per cent.

An earlier IPCC report had pointed out that if the temperatures were to increase by 1.5 degrees Celsius, hot temperature events would increase by 4.1 times in a decade; heavy precipitation events would rise by 1.5 times; and the likelihood of agricultural ecological droughts would double.

Some sub-stations in Delhi have already recorded temperatures of 49 degree Celsius last week.

	Diluted	0.99	0.98	0.71	3.49	0.92

Notes :

- As a result of restriction on business activities and business shutdowns, the volumes of the financial year 2020-21 is impacted. Therefore, financial results for the quarter ended 31st March, 2022 are not comparable to previous corresponding period results. Further the management believes that the impact of this outbreak on the business and financial position of the Company will not be significant. The management does not see any risks in the Company's ability to continue as a going concern and meeting its liabilities as and when they fall due.
- The figures of the corresponding previous quarter or year have been regrouped or reclassified where ever necessary, to make them comparable.
- Results are prepared in compliance with Indian Accounting Standard, ("Ind-AS") notified by the Ministry of Corporate Affairs.
- The above Financial Results were reviewed by the Audit Committee and approved by the Board of Directors at their respective meetings held on 19th May, 2022.
- The Company has only one segment of activity namely Textile.
- EPS of the earlier period being adjusted as a result of Bonus Issue for comparison purpose.

Notes:

- The above is an extract of the detailed format of Quarterly and Annual Financial Results filed with the Stock Exchanges under Regulation 33 of the SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015. The full format of the Quarterly and Annual Financial Results are available on the websites of the Stock Exchange(s) www.nseindia.com and www.bseindia.com and on the Company's Website www.ratnamani.com.
- The above consolidated financial results of Ratnamani Metals & Tubes Limited (the "Company") and along with its subsidiary, the "Group" were reviewed and recommended by the Audit Committee and approved by the Board of Directors at their meetings held on May 17, 2022 and May 18, 2022, respectively.
- The Board of Directors at its meeting held on May 18, 2022 has approved issue of bonus equity shares in the ratio of one equity share of ₹ 2.00 each for every two equity shares of ₹ 2.00 each held, subject to approval by the members of the Group.
- The Board of Directors at its meeting held on May 18, 2022, proposed a dividend of ₹ 14.00 per share having face value of ₹ 2.00 (pre-bonus), which translates into final dividend of ₹ 9.33 per equity share having face value of ₹ 2.00 (post-bonus) for the year ended March 31, 2022, subject to approval by the members of the Group.
- The figures for the last quarters are the balancing figures between audited figures in respect of the full financial year ending March 31, 2022 and March 31, 2021 and the unaudited published year-to-date figures upto December 31, 2021 and December 31, 2020 respectively, being the date of the end of the third quarter of the respective financial years which were subjected to limited review.
- The Group is engaged in manufacturing of Steel Tubes and Pipes. Considering the nature of Group's business and operations, as well as based on reviews of operating results by the chief operating decision makers to make decisions about resource allocation and performance measurement, the Group has identified "Steel Tubes and Pipes" as only reportable segment in accordance with the requirements of "Ind AS 108 - Operating Segments".
- The Code on Social Security, 2020 ("Code") relating to employee benefits during employment and post-employment benefits received Presidential assent in September 2020. The Code has been published in the Gazette of India. However, the date on which the Code will come into effect has not been notified and the final rules / interpretation have not yet been issued. The Group will assess the impact of the Code when it comes into effect and will record any related impact in the period the Code becomes effective.
- Key numbers of Standalone Financial Results of the Company for the quarter and period ended 31st March, 2022 are as under: (₹ in Lakhs)
